Raghavendra K

Senior UI/UX Designer | AI-Enabled Product Experiences

Name: Raghavendra K

Location: Hyderabad

Email: rkakkunoori@gmail.com

Phone: +91 9885455670

Professional Summary

Senior UI/UX Designer with extensive experience designing user-centered digital products and operational dashboards. Skilled at simplifying complex systems and data into intuitive and practical user experiences. With a strong background in UI architecture and product design, I have recently focused on designing experiences for AI-powered product features such as intelligent insights, conversational interfaces, and AI-assisted workflows. I enjoy working closely with product and engineering teams to create solutions that combine thoughtful design with modern technologies. Strong product thinking with experience translating complex systems and AI capabilities into practical user experiences.

Core Skills

UX Design

User Experience Design
User Journey Mapping
Wireframing
Prototyping
Usability Testing
Interaction Design
Design Thinking

UI Design

Interface Design
Responsive Design
Design Systems
Component-Based UI
Visual Hierarchy
Accessibility Principles

AI Product Experience

AI-assisted product features
Conversational interface design
AI insight dashboards
Human-AI interaction flows
AI-assisted monitoring systems

UX Research

User Interviews
Persona Development
User Behavior Analysis
Usability Testing

Tools

Design & Collaboration
Miro • Notion • Whiteboarding Tools • Wireframing Tools

AI Tools & Assistants
ChatGPT • Claude • Gemini • Microsoft Copilot • Perplexity AI

AI-Assisted Design & Research
AI UX Ideation • AI-assisted Research • Prompt Exploration

Professional Experience

AI Product Experience Designer (Freelance)

Recent Experience

Working with product teams to design user experiences for AI-enabled features and intelligent operational systems.

Key Contributions:

- Designed dashboards and operational interfaces for monitoring complex system data
- Created interaction flows for AI-powered insights and automated alerts
- Designed AI-assisted workflows that help users understand system behavior and take action faster
- Improved clarity of complex data by integrating AI-generated summaries and insights

- Designed interfaces where users can review and validate AI-generated recommendations

---

UI Architect

Led UI architecture and interface design for complex digital platforms and operational systems.

Key Contributions:

- Designed scalable UI frameworks for enterprise applications
- Developed reusable UI components and design standards
- Improved usability of complex data dashboards and monitoring systems
- Collaborated closely with product and engineering teams to enhance product usability

---

Senior UI Developer

Developed responsive and user-friendly interfaces for web-based applications.

Key Contributions:

- Built high-quality responsive interfaces
- Developed reusable UI components and interaction patterns
- Improved user experience through better layout, navigation, and interaction design

---

Selected Projects

AI Agentic IoT Monitoring Dashboard

Designed a smart operational dashboard that uses AI to analyze device data and highlight insights for operations teams.

Key Work:

- Designed dashboard layouts displaying device health, operational metrics, and AI-generated alerts
- Created interaction flows for reviewing AI insights and anomaly detection results

- Designed interfaces that allow users to validate and act on AI-generated recommendations
- Simplified complex IoT telemetry data through clear visualizations and summaries

Impact:

Improved operational visibility and helped teams identify device issues faster.

AI Predictive Maintenance Experience (IoT)

Designed a product experience that uses AI to identify potential device failures and assist maintenance teams.

Key Work:

- Designed AI-generated device health indicators and predictive alerts
- Created user flows for reviewing AI maintenance recommendations
- Designed dashboards showing device performance trends and system health
- Improved usability of maintenance monitoring tools

Impact:

Enabled earlier identification of potential issues and improved maintenance planning.

Domain Experience

IoT monitoring platforms
Operational dashboards
Transport and device monitoring systems
AI-assisted monitoring and analytics tools

Design Approach

My design approach focuses on creating practical and intuitive experiences that help users understand complex systems easily. When designing AI-powered features, I prioritize clarity, transparency, and usability so that users can confidently interact with intelligent systems.

Education

Bsc Commuters (Bachelor of Science and Commuters - 2005
